PROFESSIONAL SUMMARY

Data Analyst in a four-person MI function at British Airways, supporting a 100+ agent multi-channel contact centre. Produces monthly agent requirement forecasts from historical contact flow, writes production SQL across multi-table joins, CTEs and window functions, and builds Tableau and Power BI dashboards that operational stakeholders use unaided. First Class Honours in Information Technology and Business Information Systems. Frames analysis around the decision it supports — capacity planning, cost of an incentive scheme, agent performance ahead of a one-to-one. Live dashboards and documented code available online.

CORE SKILLS

SQL: PostgreSQL, SQL Server, MySQL, multi-table joins, CTEs, window functions, aggregations, subqueries, CASE logic, data modelling

BI & Visualisation: Power BI (DAX, drill-through, data modelling), Tableau (parameters, reference lines), interactive dashboard design, KPI design

Excel: Power Query, XLOOKUP, INDEX/MATCH, nested IFS, pivot tables, slicers, conditional formatting, VBA

Python: Pandas, NumPy, data cleaning, ETL, reporting automation

Analysis: Demand forecasting, capacity planning, exploratory data analysis, churn and segmentation, scenario and cost modelling, data quality validation

Business Analysis: Requirements gathering, stakeholder communication, process mapping, documentation

PROFESSIONAL EXPERIENCE

Customer Service Analyst — British Airways, Manchester, UK

April 2023 – Present

- Analyst in a four-person MI function supporting a 100+ agent multi-channel contact centre across telephony, email and webchat.
- Produce monthly agent requirement forecasts from historical contact flow, modelling volume patterns, shrinkage and occupancy to inform recruitment and shift planning.
- Analyse historical call flow to identify demand patterns and where service breaks down, quantifying the operational impact and presenting findings to inform staffing decisions.
- Build and maintain four Tableau and Power BI dashboards giving agents and team leaders direct visibility of handle time, satisfaction, resolution rate and SLA performance — used unaided ahead of one-to-ones.
- Automated recurring reporting in SQL and Excel, removing roughly a day a week of manual preparation and returning that capacity to analysis.

SELECTED PROJECTS

Contact Centre Performance Dashboards *Tableau*

- Public-data rebuild of the contact centre reporting owned in role, since the production version cannot be shared. Paired agent and manager views tracking handle time, satisfaction, resolution rate and answered-call ratio.
- Applied parameters and reference lines to plot call volume against a rolling average and rank agents side by side on consistent measures. Published and interactive on Tableau Public.

Retail & Executive Reporting Suite *Power BI, DAX*

- Built an AdventureWorks executive summary designed for ten-second scanning — \$1.83M revenue against goal, orders and returns versus target, category performance — with drill-through pages for product and customer detail.
- Developed a three-page retail report tracking transactions, profit and returns against monthly targets across the USA, Canada and Mexico, with brand-level margin and return rate.

Driver Incentive Scheme Modelling *SQL*

- Costed two competing bonus structures against the same driver population — a \$50 flat bonus with four qualifying conditions versus \$4 per trip with two — calculating total payout and qualification rates to identify the more cost-effective option.

NBA Trends & Performance Analysis, 1996–2023 *SQL*

- Queried 12,000+ player seasons with CTEs and window functions to test three claims about league evolution; two findings ran against conventional wisdom, including highest-usage players sustaining the best shooting efficiency.
- Identified a 2019 measurement policy change as the cause of an apparent drop in player height, separating a data artefact from a genuine trend.

DataBites — Browser-Based Python Learning App *Python, Pyodide, JavaScript*

- Built and shipped a progressive web app teaching Pandas, Seaborn and Matplotlib through short lessons, executing real Python in the browser via Pyodide.

EDUCATION

BSc (Hons) Information Technology and Business Information Systems — Middlesex University

2021

- First Class Honours. Focus on relational database design, business analytics, data modelling and enterprise IT architecture.
