PROFESSIONAL SUMMARY

First Class Honours graduate in Information Technology and Business Information Systems, with over three years at British Airways in a target-driven sales and service role. SQL is my strongest skill, used since university, alongside five years of Power BI and strong Excel. I build accurate reports and dashboards, track performance against targets, and spot the anomalies others miss. Looking for a junior data, reporting, MI, planning or operations role.

SKILLS

Technical: SQL (SQL Server, PostgreSQL, MySQL; CTEs, window functions, joins), Power BI (Power Query, DAX, data modelling), Excel (Power Query, XLOOKUP, INDEX/MATCH, pivot tables), Tableau, Python (pandas, currently learning)

Reporting & Analysis: MI and performance reporting, KPI and target tracking, data cleaning and validation, data modelling, dashboard development, anomaly and outlier detection, cost and revenue analysis, trend analysis

Operations: Contact centre KPIs (AHT, SLA, targets), cross-team coordination, process and continuous improvement, accuracy and attention to detail

Tools: Microsoft Office (Word, PowerPoint), Salesforce CRM, airline booking and reward systems, Figma, AI tools with output validation; stakeholder management

PROJECTS

Self-directed projects. Code, dashboards and write-ups at ibomenobasiekanem.com.

Healthcare Claims Analysis | *SQL Server, window functions*

- Analysed 449 insurance claims and 1.55M paid to find where the money goes: inpatient care is 22% of claims but 70% of spend, and the top 10 procedure codes account for 62% of total paid.
- Used window functions to compare each claim with its procedure's average, flagging claims paid up to 14 times the norm for review, and documented data quality issues including invalid codes and day/month-swapped dates.

Airline Departure Punctuality | *Power BI, Power Query, DAX*

- Built a star-schema Power BI report on 45,886 flights over 18 months for a fictional UK airline. On-time performance averaged 78.2% against an 80% target, with a repeating February dip to around 71%.
- Found knock-on delay was the costliest per event, and fixed a DAX error that counted unrecorded flights as on time.

US Electric Vehicle Adoption | *SQL Server, Power BI, DAX*

- Used real registration data on around 287 million US vehicles. EVs are 1.24% of vehicles and California holds 35.3% of them; reported count and adoption rate together, since either alone misleads.

Mobile Game Revenue & Customer Analysis | *Power BI, Power Query, DAX*

- Analysed 16,296 purchases from 14,151 customers. Revenue grew twelvefold, driven by more paying customers rather than higher spend, and the top 10% of customers produced 64.5% of revenue.
- Caught three data errors that would have misstated revenue, including a currency column blank on 26% of rows and 209 duplicate transactions.

WORK EXPERIENCE

Customer Service Advisor Apr 2023 – Present

British Airways, Manchester, UK | Gold Guest List and Premier team; previously Gold and Change Booking

- Built my own Excel tracker to report my sales by category against monthly targets, consistently meeting and exceeding targets of £60K to £150K across flights, holidays and hotel bookings.
- Identified a system fault rebooking customers from cancelled flights onto much earlier or later flights instead of new ones at a similar time; presented the impact to management and secured a new free-rebooking policy.
- Coordinate with airport, fares, ticketing and refunds teams to resolve complex cases for premium customers.
- Maintain accurate high-value customer account records in Salesforce, including vouchers, rewards and benefits, handling 20 to 25 cases a day while beating average handle time (AHT) targets.
- Trained colleagues on booking and reward systems, and received multiple Golden Ticket awards for outstanding service.

EDUCATION

BSc (Hons) Information Technology and Business Information Systems, First Class 2021

Middlesex University

- Final-year project: ran user workshops and designed and tested a Figma prototype.
