PROFILE

First Class Honours graduate in Information Technology and Business Information Systems, moving into data analysis from a customer service role at British Airways. I have built a portfolio of end-to-end Power BI and SQL projects, each with documented cleaning steps, data models, and findings, covering airline operations, customer complaints, and product revenue. I test assumptions before reporting them and flag missing data rather than hiding it. Looking for a junior data or reporting analyst role.

SKILLS

Power BI: Power Query, DAX, star schema data modelling, drill-through, KPI and dashboard design

SQL: PostgreSQL, MySQL, joins, CTEs, window functions, aggregations, subqueries, CASE

Excel & Tableau: Power Query, XLOOKUP, INDEX/MATCH, pivot tables; Tableau dashboards and parameters

Python: pandas (currently learning)

DATA ANALYSIS PROJECTS

Self-directed projects. Code, dashboards, and full write-ups on GitHub and my portfolio site.

Airline Departure Punctuality *(Power BI, Power Query, DAX)*

- Built a star-schema Power BI report on 45,886 flights over 18 months for a fictional UK carrier. On-time performance averaged 78.2% against an 80% target, with a repeating February dip to around 71%, pointing to a predictable winter planning problem.
- Found knock-on (reactionary) delay was the rarest delay type but the costliest per event, at 29.8 minutes on average, and flagged that 11.2% of delays had no recorded cause.
- Fixed a DAX error where blank values counted unrecorded flights as on time, overstating punctuality.

Airline Customer Complaints *(Power BI, DAX)*

- Tested whether complaints rise with delays across 977 complaints and £172K of compensation. They don't: the correlation was 0.11, and three quarters of complaints came from flights that left on time.
- Showed compensation cost followed complaint volume rather than complaint type, and that a flat 22-day resolution time across every category suggests a capacity issue in case handling.

Mobile Game Revenue *(Power BI, Power Query, DAX)*

- Analysed 16,296 purchases from 14,151 players. Revenue grew twelvefold, mostly from more paying players rather than higher spend, and the top 10% of payers produced 64.5% of revenue.
- Caught three data problems that would have skewed results: a currency column blank on 26% of rows, 209 duplicate transactions, and dates that would have swapped day and month.

Driver Incentive Scheme *(SQL)*

- Compared two driver bonus schemes for a busy day and recommended the cheaper one (\$1,050 vs \$2,696), noting that 10.9% of well-rated drivers were reached by neither scheme.

EXPERIENCE

Customer Service Advisor — British Airways, Manchester

April 2023 – Present

- Handle customer enquiries across phone, email, and webchat in a high-volume, KPI-measured contact centre.
- Consistently meet individual performance targets while resolving issues for customers under time pressure.
- Gained first-hand knowledge of airline operations and the customer impact of delays and disruption, which shaped my airline analysis projects.

EDUCATION

BSc (Hons) Information Technology & Business Information Systems

2021

Middlesex University · First Class Honours
